Place...

... then Space!

What is Clothesline Math?

- a **tool**
- **open & dynamic** number line
- requires students establish **benchmarks** and a **scale**
- helps students build understanding of **cardinality**, a sense of **magnitude**, and **proportional reasoning**

What is Clothesline Math?

- a **routine**
- intended for classroom **discourse**

What is Number Sense?

Think of a student you would describe as having number sense.

What understandings and skills does this student have?

Number Sense

Understandings & Skills

- a sense of what numbers mean
- an ability to look at the world in terms of quantity and numbers
- an ability to make comparisons among quantities
- flexibility, automaticity, and fluidity with numbers
- an ability to perform mental math
- flexibility with problems
- automatic use of math information
- an ability to determine reasonableness of an answer
- an ability to decide upon a strategy based on the numbers in a problem

pp. 9-10

McDonald's New Third-Pounder May Not Add Up

[Home](#) / [Alfred's Blog](#) / [Business](#) / McDonald's New Third-Pounder May Not Add Up

[April 16, 2015](#) | Taubman

The [announcement](#) last week that McDonald's will be adding a new third-pound burger to its menu brought back some unpleasant memories for me. I don't have anything against McDonald's and I wish the company's new CEO Steve Easterbrook the best of luck in revitalizing the brand. But from my experience as owner of A&W Restaurants from 1982 to 1994, I'm concerned that the American consumer may not fully understand or value the third-pound promise.

As I point out in the chapter on A&W in my memoir *Threshold Resistance*:

We were aggressively marketing a one-third-pound hamburger for the same price as a McDonald's Quarter Pounder. But despite our best efforts . . . they just weren't selling. Perplexed, we called in the renowned market research firm Yankelovich, Skelly and White to conduct focus groups and competitive taste tests.

Well, it turned out that customers preferred the taste of our fresh beef over traditional fast-food hockey pucks. Hands down, we had a better product. But there was a serious problem. More than half the participants in the Yankelovich focus groups questioned the price of our burger. "Why," they asked, "should we pay the same amount of a third of a pound of meat as we do for a quarter-pound of meat at McDonald's? You're overcharging us." Honestly. People thought a third of a pound was less than a quarter of a pound. After all, three is less than four!*

Needless to say, we recalibrated our marketing. The customer, regardless of his or her

Instructional Routines

*"Instructional routines are **specific and repeatable** designs for learning that support both the teacher and students in the classroom."*

How?

"The predictable structure lets students pay less attention to ['What is it that I'm supposed to be doing?,' 'What question will I be asked next?,' or 'How will things work today in the lesson?'] and more attention to the way in which they and their classmates are thinking about a particular math task. For you as the teacher, the routines keep the flow of the mathematics instruction deliberately predictable so that, as you gain familiarity with them, you can better attend to the most unpredictable elements of your mathematics instruction: how your students are making sense of the mathematics."

pp. 19-20

Why Use Instructional Routines?

- a greater focus on **learning**
- building crucial **mathematical thinking habits**
- **access** for a wide range of learners

Curricular Competency Connections

Area of Learning: MATHEMATICS

Grade 5

BIG IDEAS

Numbers describe quantities that can be represented by equivalent fractions.

Computational **fluency** and flexibility with numbers extend to operations with larger (multi-digit) numbers.

Identified regularities in number **patterns** can be expressed in tables.

Closed shapes have **area and perimeter** that can be described, measured, and compared.

Data represented in graphs can be used to show many-to-one correspondence.

Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to do the following:</i></p> <p>Reasoning and analyzing</p> <ul style="list-style-type: none"> Use reasoning to explore and make connections Estimate reasonably Develop mental math strategies and abilities to make sense of quantities Use technology to explore mathematics Model mathematics in contextualized experiences <p>Understanding and solving</p> <ul style="list-style-type: none"> Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving Visualize to explore mathematical concepts Develop and use multiple strategies to engage in problem solving Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures <p>Communicating and representing</p> <ul style="list-style-type: none"> Communicate mathematical thinking in many ways Use mathematical vocabulary and language to contribute to mathematical discussions Explain and justify mathematical ideas and decisions Represent mathematical ideas in concrete, pictorial, and symbolic forms 	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"> number concepts to 1 000 000 decimals to thousandths equivalent fractions whole-number, fraction, and decimal benchmarks addition and subtraction of whole numbers to 1 000 000 multiplication and division to three digits, including division with remainders addition and subtraction of decimals to thousandths addition and subtraction facts to 20 (extending computational fluency) multiplication and division facts to 100 (emerging computational fluency) rules for increasing and decreasing patterns with words, numbers, symbols, and variables one-step equations with variables area measurement of squares and rectangles relationships between area and perimeter duration, using measurement of time classification of prisms and pyramids single transformations one-to-one correspondence and many-to-one
<p>Connecting and reflecting</p> <ul style="list-style-type: none"> Reflect on mathematical thinking Connect mathematical concepts to each other and to other areas and personal interests Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts 	<ul style="list-style-type: none"> correspondence, using double bar graphs probability experiments, single events or outcomes financial literacy — monetary calculations, including making change with amounts to 1000 dollars and developing simple financial plans

Curricular Competencies

Students are expected to do the following:

Reasoning and analyzing

- Use reasoning to explore and make connections
- **Estimate reasonably**
- Develop **mental math strategies** and abilities to make sense of quantities
- Use **technology** to explore mathematics
- **Model** mathematics in contextualized experiences

Understanding and solving

- Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving
- Visualize to explore mathematical concepts
- Develop and use **multiple strategies** to engage in problem solving
- Engage in problem-solving experiences that are **connected** to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures

Communicating and representing

- **Communicate** mathematical thinking in many ways
- Use mathematical vocabulary and language to contribute to mathematical discussions
- **Explain and justify** mathematical ideas and decisions
- Represent mathematical ideas in **concrete, pictorial, and symbolic forms**

Connecting and reflecting

- **Reflect** on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

- Video

Curricular Competencies

Students are expected to do the following:

Reasoning and analyzing

- Use reasoning to explore and make connections
- **Estimate reasonably**
- Develop **mental math strategies** and abilities to make sense of quantities
- Use **technology** to explore mathematics
- **Model** mathematics in contextualized experiences

Understanding and solving

- Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving
- Visualize to explore mathematical concepts
- Develop and use **multiple strategies** to engage in problem solving
- Engage in problem-solving experiences that are **connected** to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures

Communicating and representing

- **Communicate** mathematical thinking in many ways
- Use mathematical vocabulary and language to contribute to mathematical discussions
- **Explain and justify** mathematical ideas and decisions
- Represent mathematical ideas in **concrete, pictorial, and symbolic forms**

Connecting and reflecting

- **Reflect** on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

- Geometry
- Statistics

HOSTED BY CHRIS SHORE OF THE MATH PROJECTS JOURNAL

Introduction

The Clothesline is a manipulatable number line that makes the facilitation of class discourse on number sense much more efficient and effective. The Clothesline is dynamic, meaning that the “benchmark” numbers may be adjusted when needed, as well as the values that are placed on the line. My friend and colleague, **Tim McCaffery** of Fontana Unified says it best, “**The Clothesline is the master number sense maker.**” I couldn’t agree more.

The greatest tool for teaching number sense is the number line. Unfortunately, this simple, powerful vehicle gets left behind in elementary grades. However, used properly throughout the secondary grades, the number line can develop deep, flexible number sense as well as conceptual understanding of variables, signed numbers, rules of

Home About Clotheslines

Clothesline Math
Clothesline Math has been shut off (back in 2015), how
shutting off, was poor. There aren't many elementary
resources.

Clotheslines become
proportional reasoning for
students' number sense.

Did you know that?
The clothesline was used
through 8th grade?

Each set of cards has
PDF files.

Number Line

Clotheslines

Clothesline Math has been a growing trend in mathematics education. I saw Andrew Stadel give a talk on it (back in 2015), however it was geared toward middle school and high school math. My mind, never shutting off, was pondering how to make it fit for my elementary teachers. And in my research, there aren't many elementary clothesline cards out there.

Clotheslines become interactive number lines. Students are able to manipulate cards to show proportional reasoning, precision, equality between numbers, and magnitude. The clothesline builds students' number sense. It's a routine that can work from kindergarten through high school.

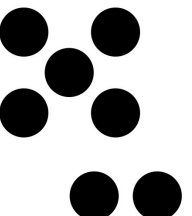

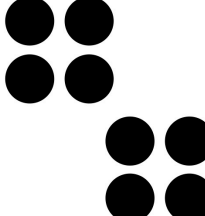

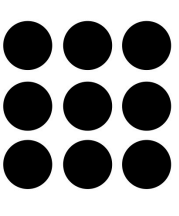

Did you know that the number line is mentioned in the Common Core Standards 26 times from 2nd grade through 8th grade?

Each set of cards has been designed to have equal cards as well as multiple representations. They are all PDF files.

Number Lines	Suggested Grade Levels
0-5	TK, Kinder
0-8	TK, Kinder

CLOTHESLINE MATH

Numbers:

4100, 4700, 4300, 4000 & 5000

Learning Standards:

Curricular Competencies

- Use reasoning and logic to explore mathematical ideas
- Explain and justify mathematical ideas and decisions
- Use mathematical vocabulary and language to contribute to mathematical discussions

Content

- numbers concepts to 10 000

Anticipated Strategies:

- Students may notice a range of 1000 between 4000 and 5000
- Students may recognize that they can break up the distance between 4000 and 5000 into 10 parts and that each part represents $\frac{1}{10}$ th of this distance, or 100
- Students may choose the halfway point, 4500, as a benchmark
- The distance between 4300 and 4500 is equal to the distance between 4700 and 4500
- The distance between 4100 and 4000 is one-half the distance between 4300 and 4500, etc.

Questions:

- What do you notice/wonder about the numbers?
- Which benchmarks were helpful? Why?
- Are the numbers spaced correctly? How do you know?
- How did you determine the spacing?
- What relationships did you see between the numbers?

Planning

Your Turn...

- What **numbers** will you choose?
- What **strategies** do you anticipate?
- What **questions** will you ask?

CLOTHESLINE MATH
