Fourth-Grade Teacher Polishing Up Speech On This Not Being Third Grade Anymore

8/18/14 1:55PM

PALMYRA, PA—Saying it was important for her students to understand their increased expectations at the start of the new school year, Pine Street Elementary school teacher Veronica Potter reportedly spent Sunday evening putting the finishing touches on a speech that will inform her incoming class they are not in third grade anymore. “Many of you are 10 years old now, and I expect you to act like it,” said Potter, rehearsing the speech that will emphasize how the students’ responsibilities will extend not just to academic performance, but to behavior and classroom participation as well. “There’s going to be homework every night and we’re going to do several science units outdoors, which will require a lot of focus. You may have gotten away with excuses or outbursts last year, but this is fourth grade now. Okay?” Sources confirmed that Potter, worried about overwhelming her students too much on the first day, later revised her speech to put more emphasis on the spring field trip to Gettysburg.

Not this but that

Geometry 2020-2021

Room #314

Teacher: Geoff Krall | Email: gmkral@gmail.com | (555)-867-5309 | Pronouns: he/him/his | Class Website: www.emergentmath.com
Tutoring Hours: MWF Lunch or by Appointment before/after school | Room #314

Welcome to Geometry. Welcome to Math. Like the study of mathematics, my class is a welcoming inclusive space. We will explore your ideas and identity through the lens of Geometry. I'm excited that you are going to learn with me over the course of the next school year. - Mr. Krall

Geometry is a branch of mathematics involving space, shape, size, and position of things. Here are a few Geometers (those who practice Geometry).

Emmy Noether
(1882-1935)

Fixed Einstein's
Theory of Relativity
with Noether's
Theorem

Vivienne
Malone-Mayes
(1932-1995)

First
African-American
professor at Baylor
University

Maryam
Mirzakhani
(1977-2017)

Beautiful
mathematical work;
exceptional
communicator

I highlighted these three Geometers because they bring a bunch of different mathematical skills to the table:

Outspoken	Courageous	Curious
Creative	Collaborative	Persistent

Some of my mathematical skills are the following:

Willingness to be wrong	Thoughtful	Humorous
-------------------------	------------	----------

What are some of *your* skills?

--	--	--

In order to bring out these skills, we need to ensure that our math classroom is a safe, inclusive space that allows us to think deeply. In order to do that, I'd like to offer a few *norms* or "ways of being." I also invite you to develop additional *norms* with me.

Be curious and express curiosity	Encourage one colleague every day	Work on the same problem at the same time
----------------------------------	-----------------------------------	---

We will reflect on these *norms* often. I'll do my best to live up to them.

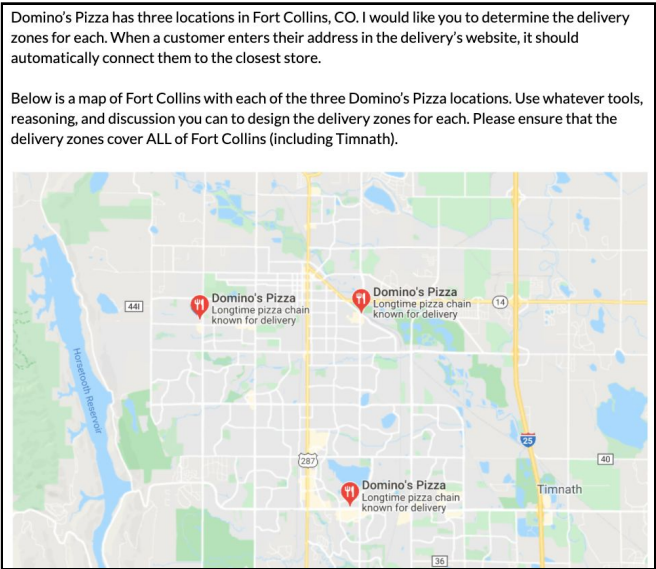

And now, some triangle dot paper. Feel free to doodle.

.....

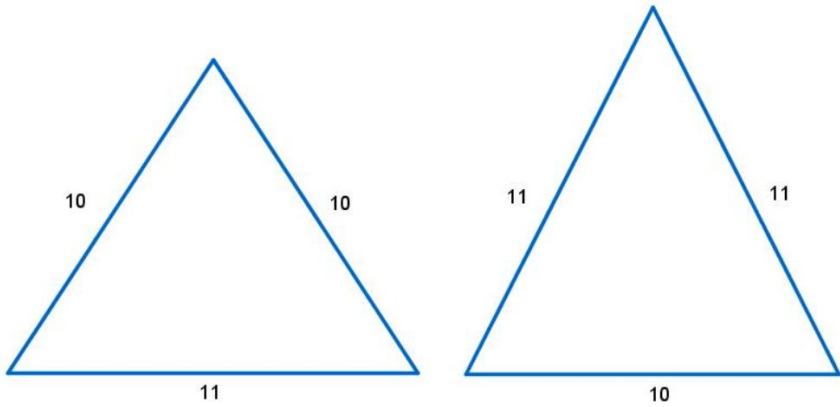

.....

The Structure of our Course: Portfolio Problems. Our courses will be structured around ten problems of significant complexity and value. Here are three problems we are going to solve this year. There are eight additional problems posted around the room (for a total of ten "anchor problems." We'll learn strategies to solve them and you'll keep a record of your solution methods in a mathematical work portfolio.

Portfolio Problem #1: [Pizza Delivery Problem](#) (September)

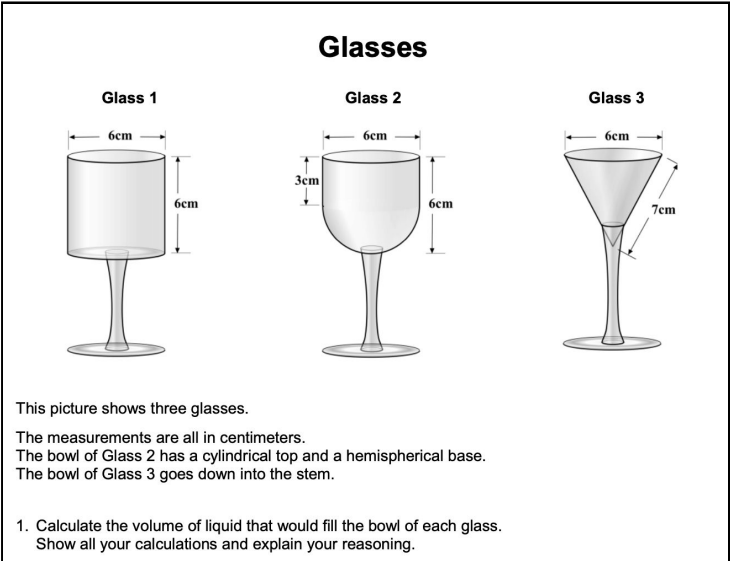

Portfolio Problem #2: Equilateral-er Triangles (October)

Which of these two triangles is the "more equilateral" triangle?

Portfolio Problem #3: Glasses (November)

Portfolio Problem #4: Elmo's Microwave Travel (December)

- How many rotations will Elmo make?
- How far does Elmo travel?

Grades. A few words about grades:

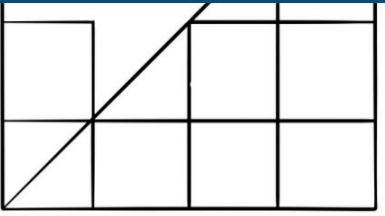

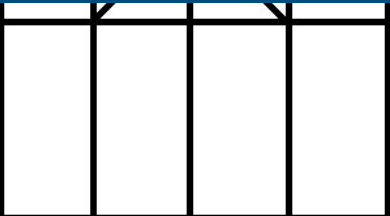

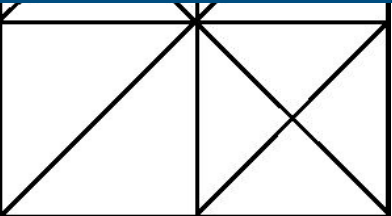

- Grades are not an accurate representation of what you know, what you can do, and who you are. Nevertheless, I understand how important they can be to your future. I will approach your grade with humility.
- Any grade you receive is eligible for full credit on redos.
- Any grade you receive is up for negotiation. Come see me and we'll figure it out.
- The assignments that count the most will be graded using a *rubric*.

How will I calculate your grade? Because I have to input a numerical grade in the gradebook at the end of every grading period, here's my breakdown:

- Mathematical Work Portfolio: 40%
- Daily Assignments: 40%
- Tests and Quizzes: 20%

And now for a bit more fun. Shade one section and see if you can figure out what fraction of the whole shape it is.

Name:

Use this form to communicate with me. Write a comment OR question OR make a suggestion about this class. (Ideally a couple of sentences). Each day I will respond to whatever you write. Thank you for your time. Leave this name tent on your table each day.

POSSIBLE QUESTIONS TO RESPOND TO: How do you feel about math? What would you like me to know about you outside of school? What hopes do you have for this class (Advanced Algebra) for 2016-17? What do you like about math or this class? What are you fearful of? What activities (sports/arts/jobs...) are you involved in after school? Draw a picture/sketch of how you are feeling. Draw a picture/sketch of something that represents you.

What do *you* **see**?

<https://www.youcubed.org/week-inspirational-math/>

What is the **fewest** number of squares you can build inside of your 11×13 rectangle?

How do you know?
Convince me!

What about in a
 12×15 rectangle?

What is the size of the
rectangle you can find
using 9 squares?

Can you find more
than one?

<https://www.youcubed.org/week-inspirational-math/>

“Imagine this problem is a room, and all students need to enter it through a doorway. If we want all our students to be able to succeed, we can ***lower the threshold*** in the doorway and the floor in the room so students have fewer barriers to get inside and get started.

Zager, T. (2017). *Becoming the math teacher you wish you'd had: Ideas and strategies from vibrant classrooms*. Stenhouse.

We also want to make sure the students in the room are not constrained, banging their heads, unable to stretch. We want to ***raise the ceiling*** so there are fewer limits on students' thinking. We want to create problems that will flow right into deeper investigations for students who are ready.”

Zager, T. (2017). *Becoming the math teacher you wish you'd had: Ideas and strategies from vibrant classrooms*. Stenhouse.

Everyone can get **started**.

Everyone can get **stuck**.

Foundations of Mathematics & Pre-calculus 10: Systems of Linear Equations

1. Teacher ensures students understand the question

2. Students work individually; teacher listens and asks questions to understand students' thinking and move students' thinking forward

3. Students work in groups; teacher listens and asks questions to understand students' thinking and move students' thinking forward

4. Teacher helps students synthesize their learning

Be willing to share your thinking, right or wrong

Be willing to listen to and learn from others' ideas, right or wrong

Be curious about the work of other students, even if you have already solved the problem one way

Actively work to make sense of what other people are saying, even if you are confused

Be willing to try someone else's method and work until you feel confident in your reasoning to solve similar problems in the future

Listen for structure, patterns, representations, and methods, not just answers and steps

“... interpersonal supports for belonging are necessary but insufficient for creating inclusive mathematical environments; teachers must also create opportunities for **mathematical belonging** through their **instructional techniques** and **pedagogical choices**.”

Matthews, J. (2021, October 15). Belonging-centered instruction: An observational approach toward establishing inclusive mathematics classrooms.
<https://doi.org/10.31219/osf.io/n7bv2>

*visibly
random*
groupings

“Although many students rail against the groups they find themselves in on Day 1, at the three-week point this resistance is usually completely gone, and they are **open to working with anyone** they are placed with.”

Liljedahl, P. (2021). *Building thinking classrooms in mathematics, grades K-12: 14 teaching practices for enhancing learning*. Corwin.

“When teachers allow students to self-select, what we see is a reflection of the social structures easily observable in the hallways. Students choose their friends, their affinity groups, or their social groups. These social structures can create barriers to collaboration in the classroom.

Liljedahl, P. (2021). *Building thinking classrooms in mathematics, grades K-12: 14 teaching practices for enhancing learning*. Corwin.

With visibly random grouping, these **barriers** begin to **fall away**. When students worked with new random partners every hour, they began to **cross social boundaries** and **form an awareness about each other** in ways that were not happening before.”

Liljedahl, P. (2021). *Building thinking classrooms in mathematics, grades K-12: 14 teaching practices for enhancing learning*. Corwin.

Depth Is More Important Than Speed!

Many mathematicians work slowly because they think deeply rather than quickly. Award-winning mathematician Laurent Schwartz talked about feeling stupid when he was in school because he was a slow thinker. When you work on maths go for depth over speed!

 **youcubed**[®]

Everyone Can Learn Maths To High Levels!

There is no such thing as a maths person! This is how we grow maths brains. When we learn, one of three things happen:

(1) We grow a new brain pathway:

(2) A brain pathway becomes stronger:

(3) Different brain pathways connect:

 **youcubed**[®]

Maths Is About Creativity And Making Sense!

Maths is a sense-making subject, you yourself can know if an answer is right by reasoning about it.

If you finish a question think of a different way to solve it or pose another question!

 **youcubed**[®]

Questions and Discussion Deepen Your Mathematical Understanding!

Studies show that doing maths with others helps you. Get together with your friends to do maths and discuss it, it will really help you!
